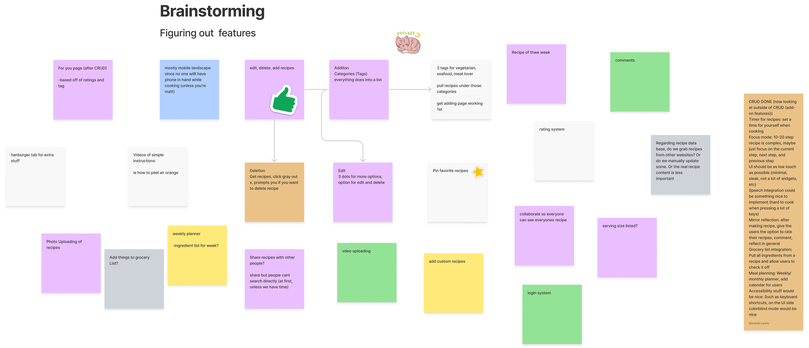
Figuring out features



CRUD DONE (now looking at outside of CRUD (add-on features))
Timer for recipes: set a timer for yourself when cooking
Focus mode: 10-20 step recipe is complex, maybe just focus on the current step, next step, and previous step
Voice: hands free, no touch as possible (minimal, steak, not a lot of widgets, etc)
Speech integration could be something nice to implement (hard to cook when covering a lot of keys)
Mirror reflection: after making recipe, give the users the option to rate and leave comment, reflect in general
Grocery list integration: Pull all ingredients from a recipe and allow users to check it off
Meal planning: Weekly/ monthly/yearly meal calendar for users
Accessibility stuff: would be nice: Such as keyboard shortcuts, on the UI side colorblind mode would be nice
